

**Aim:** To understand Static Analysis SAST process and learn to integrate Jenkins SAST to SonarQube/GitLab.

1. Open up Jenkins Dashboard on localhost, port 8080 or whichever port it is at for you.

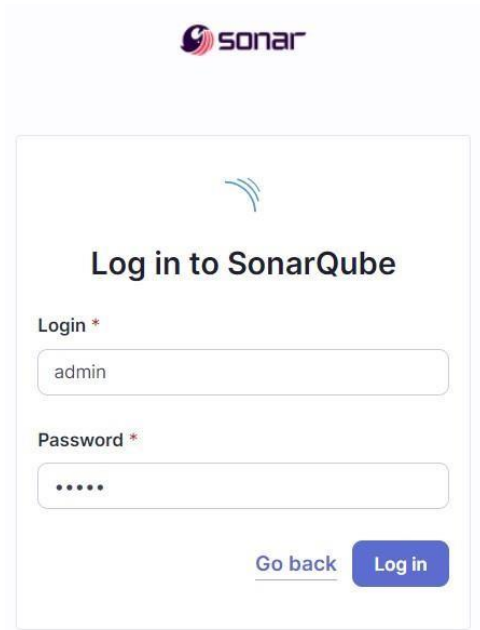

2. Run SonarQube in a Docker container using this command :a] docker -v b] docker pull sonarqube c] docker run -d --name sonarqube -e SONAR\_ES\_BOOTSTRAP\_CHECKS\_DISABLE=true -p 9000:9000 sonarqube:latest

```
C:\Users\Muskan>docker -v
Docker version 27.0.3, build 7d4bcd8

C:\Users\adity>docker run -d --name sonarqube -e SONAR_ES_BOOTSTRAP_CHECKS_DISABLE=true -p 9000:9000 sonarqube:latest
Unable to find image 'sonarqube:latest' locally

```

3. Once the container is up and running, you can check the status of SonarQube at **localhost port 9000**. The login id is **“admin”** and the password is **mus12**

The image shows the SonarQube login interface. At the top is the Sonar logo. Below it is a loading spinner. The main heading is "Log in to SonarQube". There are two input fields: "Login \*" with the value "admin" and "Password \*" with masked characters "•••••". At the bottom right are two buttons: "Go back" (a link) and "Log in" (a blue button).

#### 4. Create a local project in SonarQube with the name sonarqube

1 of 2

##### Create a local project

Project display name \*

sonarqube

Project key \*

##### Set up project for Clean as You Code

The new code definition sets which part of your code will be considered new code. This helps you focus attention on the most recent changes to your project, enabling you to follow the Clean as You Code methodology. [Learn more: Defining New Code](#)

Choose the baseline for new code for this project

☒ Use the global setting

Previous version

Any code that has changed since the previous version is considered new code.  
Recommended for projects following regular versions or releases.

☐ Define a specific setting for this project

☐ Previous version

Any code that has changed since the previous version is considered new code.  
Recommended for projects following regular versions or releases.

☐ Number of days

Any code that has changed in the last x days is considered new code. If no action is taken on a new issue after x days, this issue will become part of the overall code.  
Recommended for projects following continuous delivery.

☐ Reference branch

Choose a branch as the baseline for the new code.  
Recommended for projects using feature branches.

Back

Create project

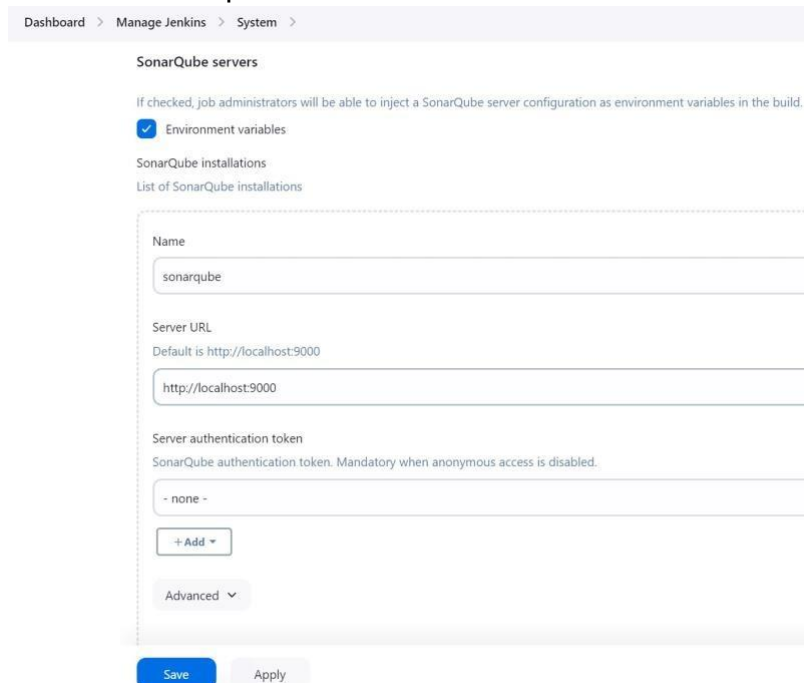

5. Setup the project and come back to Jenkins Dashboard. Go to **Manage Jenkins** → **Plugins** and search for **SonarQube Scanner** in **Available Plugins** and install it.

6. Under '**Manage Jenkins** → **System**', look for **SonarQube Servers** and enter these details.

Name : sonarqube

Server URL : http://localhost:9000

7. Search for SonarQube Scanner under Global Tool Configuration. Choose the latest configuration and choose Install automatically.

**Manage Jeknins → Tools → SonarQube Scanner Installation**

Dashboard > Manage Jenkins > Tools

SONARQUBE SCANNER FOR MSBUILD

Add SonarScanner for MSBuild

SonarQube Scanner installations

Add SonarQube Scanner

**SonarQube Scanner**

Name  
sonarqube

☒ Install automatically ?

**Install from Maven Central**

Version  
SonarQube Scanner 6.2.0.4584

Add Installer ▾

Add SonarQube Scanner

Ant installations

Add Ant

Save Apply

8. After the configuration, create a **New Item** in Jenkins, choose a **freestyle project** named **sonarqube**.

Jenkins

Search (CTRL+K)

Aditya Nagesh Raorane log out

Dashboard > All > New Item

**New Item**

Enter an item name:  
sonarqube

Select an item type:

- Freestyle project**  
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
- Maven project**  
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.
- Pipeline**  
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- Multi-configuration project**  
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- Folder**  
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder is a real container.

OK

9. Choose this GitHub repository in **Source Code Management**.

[https://github.com/shazforiot/MSBuild\\_firstproject.git](https://github.com/shazforiot/MSBuild_firstproject.git)

It is a sample hello-world project with no vulnerabilities and issues, just to test the integration.

The screenshot shows the SonarQube Configuration page, specifically the Source Code Management section. The left sidebar lists various configuration categories: General, Source Code Management (selected), Build Triggers, Build Environment, Build Steps, and Post-build Actions. The main content area is titled 'Source Code Management' and includes options for 'None' and 'Git' (selected). Under the 'Git' option, there is a 'Repositories' section with a text input for 'Repository URL' containing 'https://github.com/shazforiot/MSBuild\_firstproject.git'. Below this is a 'Credentials' dropdown menu set to '- none -' with an '+ Add' button. An 'Advanced' dropdown is also present. At the bottom of the configuration area are 'Add Repository' and 'Branches to build' sections. The page concludes with 'Save' and 'Apply' buttons.

10. Under **Build-> Execute SonarQube Scanner**, enter these **Analysis Properties**.

Mention the SonarQube Project Key, Login, Password, Source path and Host

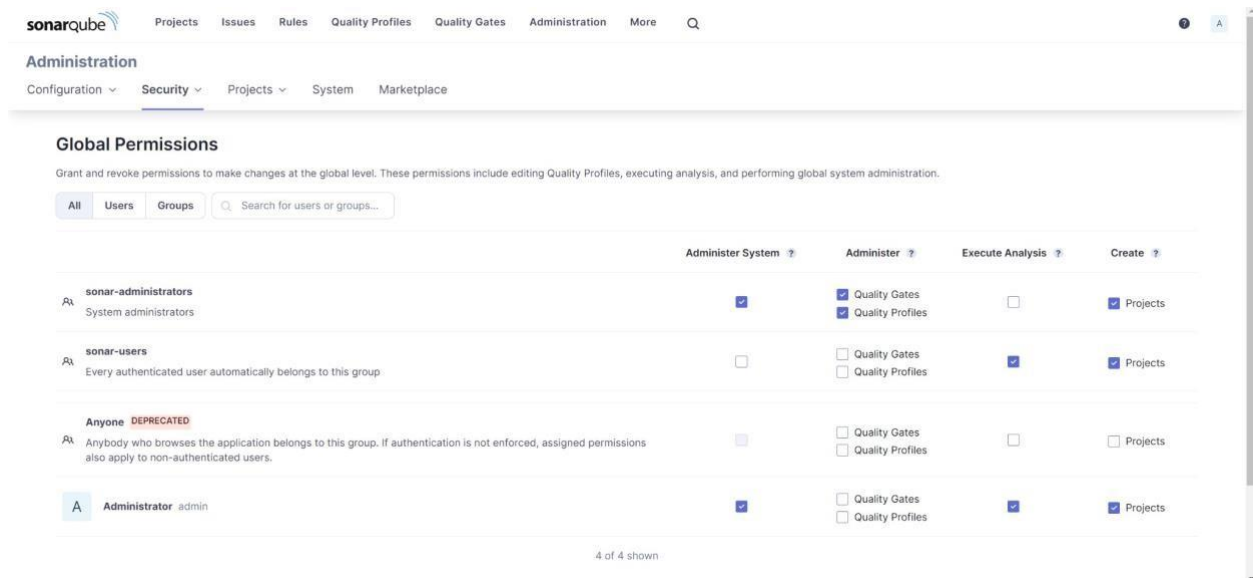

URL. sonar.projectKey=sonarqube sonar.login=admin sonar.password=aditya

sonar.sources=.

sonar.host.url=http://localhost:9000

The screenshot shows the SonarQube Configuration page, specifically the 'Execute SonarQube Scanner' section. The left sidebar is the same as the previous image. The main content area is titled 'Execute SonarQube Scanner' and includes a 'JDK' dropdown menu set to '(Inherit From Job)'. Below this is a 'Path to project properties' text input. The 'Analysis properties' section contains a text area with the following properties: sonar.projectKey=sonarqube, sonar.login=admin, sonar.host.url=http://localhost:9000, and sonar.sources=.. Below the analysis properties is an 'Additional arguments' dropdown menu and a 'JVM Options' dropdown menu. At the bottom of the configuration area is an 'Add build step' button. The page concludes with 'Save' and 'Apply' buttons.

11. Go to <http://localhost:9000/admin/permissions> and allow Execute Permissions to the Admin user.

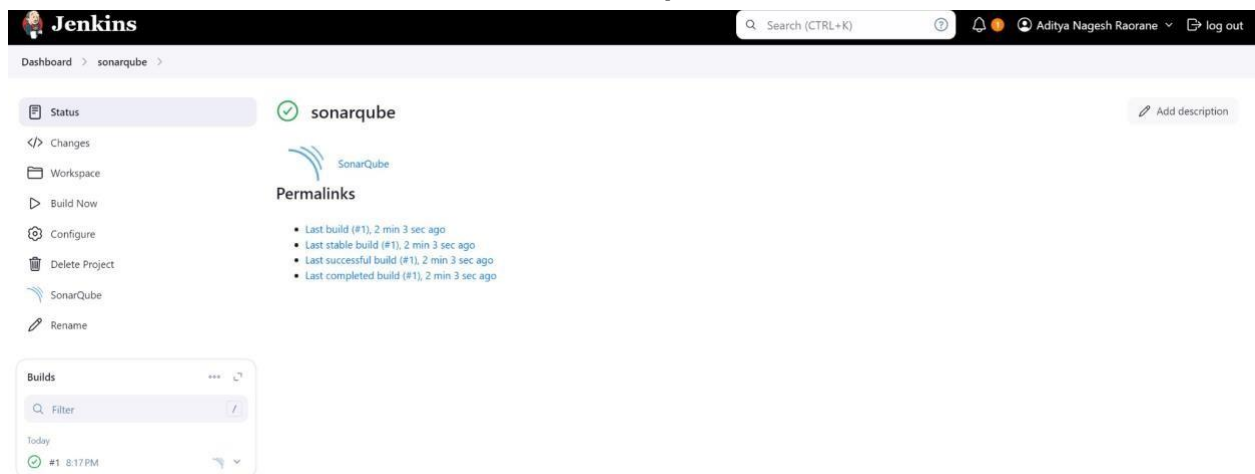

The screenshot shows the SonarQube Administration interface, specifically the 'Global Permissions' section under 'Security'. The page allows granting and revoking permissions at the global level. A table lists four user groups with their respective permissions for 'Administer System', 'Administer', 'Execute Analysis', and 'Create'.

	Administer System ?	Administer ?	Execute Analysis ?	Create ?
<b>sonar-administrators</b> System administrators	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> Quality Gates <input checked="" type="checkbox"/> Quality Profiles	<input type="checkbox"/>	<input checked="" type="checkbox"/> Projects
<b>sonar-users</b> Every authenticated user automatically belongs to this group	<input type="checkbox"/>	<input type="checkbox"/> Quality Gates <input type="checkbox"/> Quality Profiles	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> Projects
<b>Anyone</b> <small>DEPRECATED</small> Anybody who browses the application belongs to this group. If authentication is not enforced, assigned permissions also apply to non-authenticated users.	<input type="checkbox"/>	<input type="checkbox"/> Quality Gates <input type="checkbox"/> Quality Profiles	<input type="checkbox"/>	<input type="checkbox"/> Projects
<b>Administrator</b> admin	<input checked="" type="checkbox"/>	<input type="checkbox"/> Quality Gates <input type="checkbox"/> Quality Profiles	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> Projects

12. Run The **Build** and check the **console output**.

The screenshot shows the Jenkins Dashboard for a job named 'sonarqube'. The 'Status' tab is selected, showing a green checkmark and the SonarQube logo. A 'Permalinks' section lists recent build events. A 'Builds' list at the bottom shows a single build (#1) completed today at 8:17 PM.

**Status** ☒ sonarqube [Add description](#)

**Permalinks**

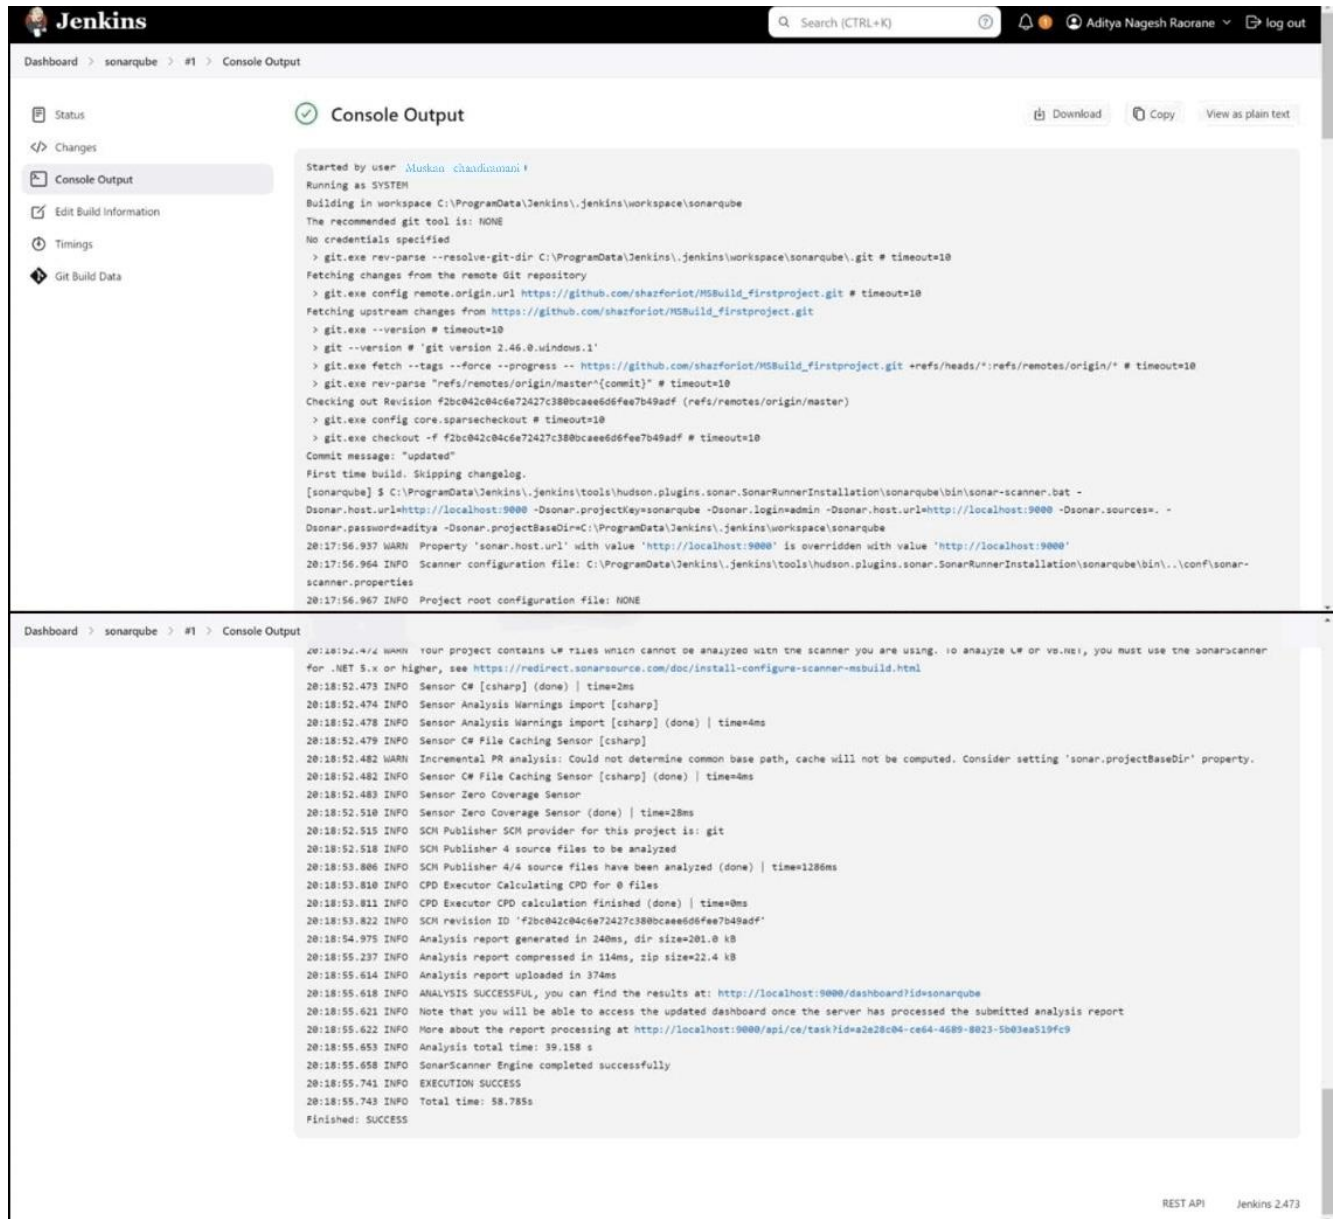

- Last build (#1), 2 min 3 sec ago
- Last stable build (#1), 2 min 3 sec ago
- Last successful build (#1), 2 min 3 sec ago
- Last completed build (#1), 2 min 3 sec ago

**Builds**

Filter

Today

#1 8:17 PM

The screenshot displays the Jenkins web interface for a build named 'sonarqube' with build number '#1'. The 'Console Output' tab is selected, showing the execution of a build script. The script starts by cloning a repository from GitHub, then runs a SonarScanner to perform a code quality analysis. The analysis is successful, and the build completes with a 'SUCCESS' status.

```

13. Once the build is complete, check the project in SonarQube.

The top screenshot shows the SonarQube 'Projects' page. It features a sidebar with filters for 'My Favorites' and 'All'. The main area displays a list of projects, with 'sonarqube PUBLIC' highlighted. The project status is 'Passed', and the last analysis was 3 minutes ago. The bottom screenshot shows the 'Overview' page for the 'main' branch. It displays a 'Passed' Quality Gate status and a warning that the last analysis has warnings. The page includes tabs for 'New Code' and 'Overall Code'. The 'Overall Code' tab shows metrics for Security, Reliability, and Maintainability, all with '0 Open issues' and an 'A' grade. It also shows 'Accepted issues' (0), 'Coverage' (0.0%), and 'Duplications' (0.0%).

In this way, we have integrated Jenkins with SonarQube for SAST.

## **Conclusion:**

In this experiment, we have understood the importance of SAST and have successfully integrated Jenkins with SonarQube for Static Analysis and Code Testing.
